Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/882,810

Applicant(s)

CHAN ET AL.

Examiner

Taghi T. Arani

Art Unit

2131

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 18 August 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-29 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-29 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. Claims 1-29 have been examined and are pending.

Response to Pre-Brief Conference Request

2. In response to the pre-brief conference requested 8/18/2005, a new ground of rejection is presented in this Office action. In pre-brief conference request, the Applicant merely argues that Spies does not teach “pass one or more keys from the DVD to the key exchange client” recited in claim 1. The new ground (s) of rejection presented in this Office action addresses the claimed feature. Therefore, in view of the new ground (s) of rejection, Applicant’s arguments are rendered moot and a pre-brief conference is not necessary at this time.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action: A person shall be entitled to a patent unless –

(b) the invention v,/as patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 13,17-18, 19, 21, 23-25, and 27-28 are rejected under 35 U.S.C. 102(b) as being anticipated by Spies et al, hereinafter Spies (USP 6,055,314).

As per claim 13, Spies teaches receiving a request, from a remote client computing device, to obtain one or more keys located on a removable storage medium readable by the server device (col. 5, lines 35-45, where the cryptographic keys are ported to the merchant key store physically on a floppy diskette, or other means, col. 6, lines 34-58, col. 13, lines 24-30, col. 4, lines 35-53), wherein the one or more keys are for decrypting content on the removable storage medium (col. 12, lines 25-30); obtaining the one or more keys from the removable

Art Unit: 2131

storage medium (col. 6, lines 34-58, see also, col. 12, lines 9-11); and communicating the one or more keys to the remote client computing device (col. 12, lines 25-30).

As per claim 19, Spies teaches receiving, from a media player executing on the computing device, a request to perform at least part of a key exchange process with a disc drive in order to decode media content on a disc accessible to the disc drive (col. 13, line 24-30, see also col. 5, lines 35-45, where the cryptographic keys are physically ported on a floppy diskette (disc), or other means to the merchant unit); and communicating, with a remote server (merchant unit) at which the disc drive (the diskette or other means) is located, to obtain one or more keys (col. 6, lines 34-58, where the merchant computing unit downloads the cryptographic keys over the distribution network to the purchaser IC card) from the disc (diskette, or other means) that can be used at the computing device to decode the particular media content (col. 12, lines 8-30).

As per claim 24, Spies teaches a server component configured to receive Content Scrambling System (CSS) key requests from a client component on a client device via a network; and wherein the server component, in conjunction with the client component, operates as an intermediary between a DVD player on the client device and a DVD drive on the server device (col., 12, lines 8-53).

As per claim 27, Spies teaches a key exchange server component configured to interact with a key exchange client component on a remote client system in order to exchange Content Scrambling System (CSS) keys between a DVD drive of the system and the key exchange client component; and wherein the CSS keys are exchanged for use by a DVD content player implemented completely at the remote client system (col. 12, lines 8-53).

Art Unit: 2131

As per claims 17, 25, and 28, Spies teaches the key exchange server comprises a remote procedure call (RPC) server (col. 6, line 35).

As per claims 18 and 23, Spies teaches one or more computer-readable memories containing a computer program that is executable by a processor to perform the method recited in claim 13 (col. 12, line 8).

As per claim 20, Spies teaches the disc comprises an optical disc (col. 12, line 53).

As per claim 21, Spies teaches the decoder has no knowledge that the DVD drive is included as part of the server device (col. 12, lines 25-30).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1, 3, 4, and 6-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent 6, 055,314 to Spies et al. (hereinafter "Spies") and further in view of U.S. Patent 6,272,283 to Nguyen.

As per claim 1, Spies teaches a server device including a DVD drive, wherein the server device further includes a key exchange server, and wherein a DVD is accessible to the DVD drive (col., 3, lines 44-50, i.e. **video content delivery system includes a video content provider which may or may not be the same as the video merchant and a video encryption device at the video content provider supplies a video data stream in encrypted format on a distribution medium, such as a distribution network or a digital video disk (DVD)**), col. 5,

Art Unit: 2131

lines 35-45, where provider computing unit 34 moves cryptographic program keys 42 for those programs that the video merchant is authorized to sell into a secure key store 40 located at the merchant's facility or accessible by a video merchant computing unit 44. The program keys are conveyed to the secure key store 40 via a secure or unsecure link or physically ported on a floppy diskette, or other means, see also col. 12, lines 49-55, where the video input is implemented either as a network port connected to receive the video data stream from a distribution network or an optical reader for reading the video data stream from a DVD); a client device coupled to the server device via a network (col. 5, lines 55-col. 6, line 33), the client device including a key exchange client and a decoder (col. 2, lines 32 - 59); and wherein the key exchange client and the key exchange server communicate with one another to pass one or more keys from the DVD to the key exchange client (col. 6, lines 55-58, i.e. the merchant computing unit 54 downloads the cryptographic key 56 over the distribution network to the purchaser IC card 50) to allow the decoder to decrypt content received, via the network, from the DVD (col. 3, lines 40-45).

While Spies teaches downloading the cryptographic key from the merchant unit (server device) to the client IC card and that the cryptographic keys are ported to the merchant units on a floppy diskette or other means, Spies fails (as persuasively argued by the Applicant) to disclose passing the cryptographic keys from the DVD to the key exchange client.

However, in an analogous art, Nguyen teaches passing keys from a DVD disks to DVD player (col. 6, lines 15-35) which controls playing DVD videos by DVD disk drive using standard operating system functions and drivers.

Art Unit: 2131

Therefore, it would have been obvious to one of ordinary skill in the art to modify Spies' system and method for secure purchase and delivery of video content programs with the teachings of Nguyen to have cryptographic keys pass from the DVD to the key exchange client (DVD player) with a motivation to block viewing of formats that can be copied by a VCR while allowing viewing in computer monitor formats that are not easily taped (Nguyen, col. 2, lines 32-40).

As per claim 3, Spies teaches the decoder has no knowledge that the DVD drive is included as part of the server device (col. 12, lines 25-30).

As per claim 4, Spies teaches the key exchange server comprises a remote procedure call (RPC) server (col. 6, line 35).

As per claim 6, Spies teaches the network comprises a public network (col. 2, lines 60-63).

As per claim 7, Spies teaches the network comprises a home network (col. 9, line 4).

As per claim 8, Spies teaches the keys are used for DVD movie content. DVD movies are protected by CSS, therefore, this limitation is inherently taught by Spies.

As per claim 9, Spies teaches the decoder is implemented as part of a media content player implemented completely on the client device (col. 9, lines 18-20).

As per claim 10, Spies teaches the decryption of DVD movies. The standard for DVD movie includes using region information in the decryption algorithm. Therefore Spies teaches this limitation.

As per claim 11, Spies teaches pit least one of the keys is specific to a media content player incorporating the decoder, and wherein the server component obtains, based on

Art Unit: 2131

information received from the client component, the appropriate key for the media content player (col. 12, lines 9-15).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 2, 12, 14, 15, 16, 26, and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Spies and Nguyen, and further in view of PowerFile C20 FAQs, hereinafter PowerFile.

As per claims 2, 15, 26, and 29, Spies teaches that the user can download videos from DVD but is silent in explicitly disclosing the DVD come from a DVD changer. Powerfile teaches a device whereby remote users can download DVD content from a DVD changer over a network (page 2). In view of this it would have been obvious to one of ordinary skill in the art at the time of the invention to employ the teachings of PowerFile within the system of Spies because DVD can be safely stored in DVD changers and are accessible to authorized user.

As per claims 12, 14, and 16, Spies is silent in disclosing that the server and client of a video on demand system are executing on a Windows operating system. Powerfile's DVD on

Art Unit: 2131

demand system are executing on Windows operation systems. In view of this it would have been obvious to one of ordinary skill in the art at the time of the invention to employ the teachings of Powerfile within the system of Spies because PC are operated by Windows' systems.

Claims 5 and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Spies in view of a description of DirectShow (www.compressionworks.com).

As per claims 5 and 22, Spies teaches that the client uses a media application to view the downloaded content. Spies is silent in disclosing that the media application is DirectShow. DirectShow is a user application, which accepts streamed Video such as MPEG. MPEG is the data compression method used on DVD video. In view of this it would have been obvious to one of ordinary skill in the art at the time of the invention to employ the teachings of DirectShow within the system Spies because Spies teaching streaming DVD content and DirectShow is a capable user application which performs this functionality.

Conclusion

Prior arts made of record, not relied upon:

US 6,546,193 to Um et al is directed to a reproducing apparatus for a remote rental system, and in particular to a reproducing apparatus and control method for the apparatus by which the playback permission of the video title, advertisements, and charge collection are performed remotely over a public communication network between a remote server and a reproducing apparatus. The remote rental system of the invention comprises an information-stored medium with a unique ID code, a reproducing apparatus for playing the data on the information-stored medium, and a remote server for controlling the playback of the information-stored medium on the reproducing apparatus over the communication network. The remote rental

Art Unit: 2131

system enables customers to keep the information-stored medium at a low cost without return, to use the information-stored medium whenever they want, and to receive useful information such as public advertisements that are provided continually over the communication network.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Taghi T. Arani whose telephone number is (571) 272-3787. The examiner can normally be reached on 8:00-5:30 Mon-Fri.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ayaz Sheikh can be reached on (571) 272-3795. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
